

Bimax PDF reliability inspection

Bimax local qualification · 2026-10-06

Course one: inspection summary

Ultrasonic inspection confirms a minimum shell thickness of 8.2 mm at grid location C4. The measurements on this page must remain exact text without OCR.

Location	Thickness	Disposition
C4	8.2 mm	Review against design minimum
C5	8.6 mm	Retain for comparison

Course two: verification

Ultrasonic inspection confirms a minimum shell thickness of 8.2 mm at grid location C4. The measurements on this page must remain exact text without OCR.

- Embedded text preserves the measured value.
- No footer-only page should reach OCR.
- Every finished page carries its own number.

Course three: follow-up

Ultrasonic inspection confirms a minimum shell thickness of 8.2 mm at grid location C4. The measurements on this page must remain exact text without OCR.

This disposable report verifies the bundled PDF writer and real Poppler reader. It is a local fixture, not a real inspection or an engineering recommendation.
